

RARE BLUE AMBER

Blue Amber's main source is the Dominican Republic, but can also be found on the Island of Sumatra (Indonesia) and is quite rare. *Blue Amber is so called, as it exhibits a distinct slight blue tone under ultraviolet light.

The energy frequency connects to the solar plexus and third eye chakras, which is cleansing and stimulating for these chakras. Its purifying energy helps to clear low vibrational energies that may be present in one's energy field. Blue Amber helps to transform negativity into a positive joy-filled energy.

Through the third eye charka, Blue Amber aids one with their psychic abilities, helping to increase your inner vision, allowing you to have clarity of thought and to view life from a higher perspective, bringing an understanding to your life's path.

The energy of Blue Amber helps to raise the vibration of your physical body, which is said to generally help with your health and well-being.

*When natural light strikes Blue Amber on a white surface, the light particles pass right through, and then are refracted off the white surface. Result: the Blue Amber has a slight blue hue. When the same natural light particles strike the Amber on a black surface, the light particles don't refract off the black surface, thus refracting off the actual Amber. Hydrocarbons in the Blue Amber turn the sun's ultraviolet light into blue light particles, resulting in the famous glow of Blue Amber. This effect is only possible on Dominican Blue Amber.
