

Ethiopian Opal

KEYWORDS Purification, strength

CHAKRAS Root, Sacral, Heart
(1st, 2nd, 4th)

ELEMENT Water, Fire & Earth, Storm

Ethiopian Opal - hydrophane Opal that forms in nodules within volcanic ash in seams between rhyolite layers.

It occurs in a variety of colors and patterns and usually displays brilliant flashes of color. The new Opals from the Welo district of Ethiopia discovered in 2008 have proven to be extremely stable despite their porosity, able to absorb water and change transparency or opacity, then revert back to their original state with no adverse reaction or cracking.

These stones are marvelous for utilizing Water energy, the energy of stillness, quiet strength, and purification. Metaphysical healers may be more familiar with the original red or brown-based Ethiopian Flash Opal discovered in 1994 at Yita Ridge, the high-vibration Fire energy stones of ancient wisdom that burn off karma from the past and open the way to rebirth. These stones carry a soul holograph and lend access to the past, present and future, stimulating all of one's metaphysical gifts. Activating the Base and Sacral Chakras, these are joy-filled gems, uniting all the subtle bodies into equilibrium so the whole body functions harmoniously. Ethiopian Opals carry positive dragon energy, for both personal and planetary use.
